

GRAY WOLF

Senior Software Developer, Backend

At Gray Wolf, we are passionate about pioneering the future of virtual assets by leveraging leading-edge technologies to deliver the security and risk mitigation experience of the 21st Century.

By building the most advanced collaborative intelligence and communication platform in the world, we can rapidly understand the risks of virtual assets and cryptocurrency in a way that will forever reduce the use of Cryptocurrencies and Blockchain as vehicles for criminal activity. Defi, Cryptocurrency, and Virtual Assets represent a rapidly growing and revolutionary field of technology that can forever change how data is viewed and dealt with. By enabling the world to have security and peace of mind when using these technologies, we can pioneer their worldwide adoption and endorsement. Designing, building, and testing the collaborative intelligence and communication platform will be the primary focus of the Collaborative Intelligence Software Developer

A strong candidate will be an experienced software developer with an understanding of real-time, scalable technologies and data, and a drive to solve meaningful, real-world problems. Your responsibilities will include:

- Working directly with our clients who include some of the world's leading intelligence and risk-mitigation companies with regards to Virtual Assets and Blockchain
- Developing accurate intelligence representations for Virtual Asset risk assessment
- Collaborating with various software and data analytics teams to meet intelligence goals

- Working on a state-of-the-art intelligence communication platform designed to develop a holistic understanding of Cryptocurrency and Virtual Asset Risk

What we are looking for

- Experience building scalable, real-time data systems for commercial use
- Understanding of rule-based system like expert systems
- BS minimum in the areas of Computer Science/Engineering, Data Engineering or other related fields
- Experience shipping commercial cloud software, rapid prototyping and DevOps
- Curiosity and a willingness to think creatively and solve complex issues
- Proven proficiency with web servers and API development
- Excitement towards developing meaningful software to solve real problems
- A belief in the practices of agile software development

Why work with us?

- Be a major part of pioneering Blockchain, Smart Contract, Defi, and Virtual Asset Technology
- Work directly with clients and see their feedback and enjoyment with the software you develop
- Lots of room in the company to grow and the potential to develop meaningful equity ownership
- Freedom and flexibility in work-life balance
- Have your voice be heard and have independence and an opportunity to have a real impact

If this job posting excites you, you can see yourself in this role, and you would like an opportunity to learn more about this exciting career opportunity and our innovative start-up team, please get in touch! We would love to hear from you. If this sounds like someone you know, please share it with them!
